

## JERUSALEM, HA-NEVI'IM STREET: THE COINS

DONALD T. ARIEL

One-hundred and eleven coins were uncovered in the 2007 and 2008 excavations on 25 Ha-Nevi'im Street in Jerusalem (see Sulimani 2020); forty-nine of these, all bronze, were identified (see catalogue below). The excavation uncovered architectural remains of the two main construction phases at the site, from the Byzantine and the Ottoman periods.

A third of the identified coins (Nos. 1–16), however, antedate these dates, and clearly reflect activity in that part of Jerusalem from the second century BCE to the first century CE. Almost all of the ceramic and glass finds from the excavations seem to derive from fill material brought to the site, apparently from somewhere nearby, to level the area prior to construction and to form the floor beddings of a large Byzantine-period structure constructed at the site. This can explain the earlier finds.

However, this is not the first excavation in the vicinity that produced relatively large numbers of coins of these centuries. An excavation on Monbaz Street, c. 100 m to the southwest of 25 Ha-

Fig. 1. Coins.

Nevi'im Street, presents the same picture: “building remains from the Byzantine and late Ottoman periods, as well as small finds from the Second Temple (late second century BCE – first century CE)” (Sion and Rapuano 2018:1). In the 25 Ha-Nevi'im Street excavations, 15 coins dating from the Second Temple period (Nos. 1–15) were found, while at the Monbaz Street excavation 21 coins of this period—comprising half of the identified coins—were uncovered. At both sites the coins are evidence of an earlier occupation that left no architectural remains, and in both cases coins from the first century BCE were more numerous than coins from the first century CE (Ariel 2018).

The earliest coin (No. 1) may relate to another phenomena that has been recently identified in sites in this part of the city and further to the northwest: occupation levels that date from the period of Antiochus VII's siege of Jerusalem (Ariel, forthcoming). As for the bulk of the finds, which is later in date, one possibility is that it derives from some nearby Second Temple-period settlement outside the Jerusalem city walls. However, it is equally possible that the source of the debris is accumulations of garbage dumped out of the city from over the ‘Third Wall’—as that city wall and maybe even the Psephinus Tower along the wall seem to have been not far away (Avi-Yonah 1968:106). Dumping garbage over city walls was common in antiquity, and, centuries later, the debris would have been a ready source of constructional material.

Of the 27 Byzantine-period coins (Nos. 17–43), 22 come from contexts that are associated with the large, peristyle building. Two of these were found in walls or very near them: in W6 (No. 35) and W7 (No. 40); the latter—a *follis* of Maurice (586/7 CE)—suggests that the building was constructed in the late sixth century CE at the very earliest. The rest of the coins were found either in the bedding of the courtyard’s floor or in the fills under the bedding and in the surrounding peristyles. These include several fifth–sixth century CE coins (Nos. 33, 34, 36–38) and a sixth-century CE cast imitation of an Alexandrian *dodecanumia* (No. 42); a very similar coin was found in a fill that abutted from the outside the foundation of the northern wall of the building (No. 43). These coins corroborate the late Byzantine-period date of the structure, a conclusion which arises from both the ceramic (see Sulimani 2020: Figs. 14–16) and the glass (see Winter 2020) finds uncovered in the excavation.

Three coins date from the time span between the Byzantine and the Ottoman periods of occupation at the site: a single coin from each of the Umayyad, Ayyūbid and Mamlūk dynasties (Nos. 44–46). Coin No. 46, a Mamlūk *fals*, is obviously intrusive, as it was found in the Byzantine floor makeup. The other two are unstratified.

Three Ottoman coins (Nos. 47–49) were not found in Areas B, C and E, where remains of the Ottoman building were uncovered, but rather, unexpectedly, in Area A.
